# About us

**WOOD PLASTIC COMPOSITE (WPC)** products have natural appearance, long life, light weight, low maintenance, no warping, no rotting, no trip hazards, corrosion/electrical resistance, low tooling/installation cost, long service life, no splintering, UV stable.

The materials will not warp, rot or splinter like natural wood it makes for very rapid installation. The range of bespoke fixing systems ensure consistent gapping to suit permanent or removable requirements. The range can be supplemented with railing and pergola, produced from the same recyclable materials to suit specific project needs.

# WOOD PLASTIC COMPOSITE

INNOVATION AND  
WOOD TECHNOLOGY

**DURABLE**

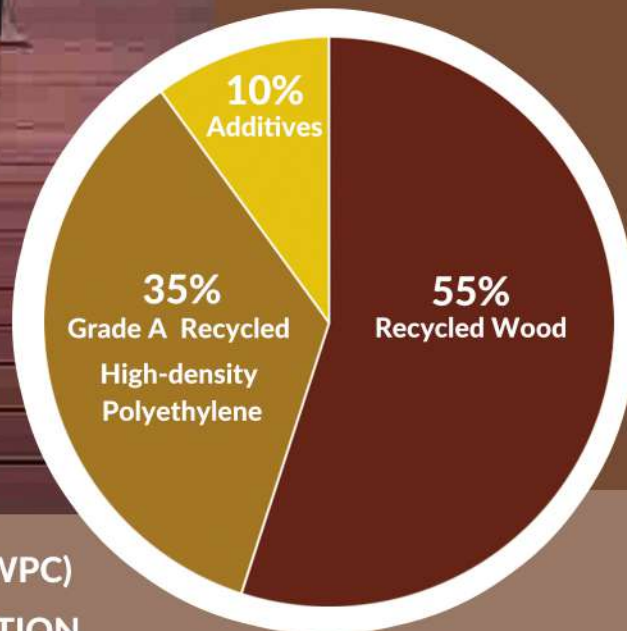

**WOOD PLASTIC COMPOSITE (WPC)** products compete very favorably on a life cycle cost basis versus traditional materials due to their limited maintenance needs and long life span.

Our products are passed CE, ISO certificates and have SGS test reports for quality, so we think our deck can be suitable in most countries. It can be supplemented with railing and pergola, produced from the same recyclable materials to suit specific project needs.

**ELEGANT**

**WOOD PLASTIC COMPOSITE (WPC)**  
**MATERIAL COMPOSITION**

# VIRTUALLY HASSLE-FREE

## **LOW-MAINTENANCE**

Unlike standard timber decking, WPC decking never needs to be painted, stained, or sealed. Furthermore, since the boards are Anti-UV and Waterproof, your deck will last for decades without warping or rotting. Aside from the occasional wash, WPC decking requires no maintenance whatsoever, leaving you with plenty of free time to enjoy your outdoor living space!

## **HEAT AND FADE RESISTANT**

Our decking comes in a variety of styles and colours, but no matter which of our products you choose, your deck boards will stay rich, vibrant and naturally beautiful for years to come – with virtually no maintenance required, as mentioned above. The boards will also stay cool to the touch, even on the hottest summer days; this is due to the highly reflective pigments that are used to colour all WPC decking products.

## **SAFETY**

WPC decking products, unlike traditional wood, are splinter-free, so you can feel free to relax and kick off your shoes. Our safe, high-performance products are great for pubs, cafés and restaurants with their own outdoor areas, and because WPC decking has a slip-resistant surface, it is also ideal for pool decks and spa surrounds.

## **DURABILITY**

Bad weather can be rough on a garden deck; hot summers, cold winters, and rainy days often leave wooden deck boards warped and full of splinters. WPC decking, on the other hand, will stay beautiful no matter what the weather throws at it – our manufacturing process ensures long-lasting quality, which is why all of our decking products come with a limited 25-year warranty (15 years for commercial installations).

## **INCREASES THE VALUE OF YOUR HOME**

Another great reason to add WPC decking to your property? It will significantly increase that property's value! It will also serve as an additional selling point if you do choose to move away; potential buyers will be bowled over by your beautiful deck, especially when you tell them how little maintenance it requires!

DELIVERING POSSIBILITIES

### Patio - Laguna

Wood Plastic Composite Dark Teak Decking

**UCC Park Cafe**  
**Makati, Metro Manila**

**Poolside - Nasugbu, Batangas**

Wood Plastic Composite Dark Teak Decking

**AGG-164W13**
